

EGOR BORISENKO

Senior QA Automation Engineer

Rishon LeZion, Israel | 054-8119847 | yegor.borysenko@gmail.com | [LinkedIn](#)

SUMMARY

Senior QA Automation Engineer with 11+ years in software quality, including 6 years designing test automation frameworks. Built end-to-end automation frameworks from scratch in TypeScript/Playwright and Python/Pytest for 5 client products in defense, healthcare, and e-commerce. Cut regression time from 3 days of manual testing to a 60-minute automated run. Strong in API testing, CI/CD, and AI-assisted test development (Copilot, Cursor, MCP). Brings deep debugging skills from 5 years of Wi-Fi driver/firmware validation at Intel.

SKILLS

- **Languages:** TypeScript, Python, SQL
- **Automation:** Playwright, Pytest, Selenium, Page Object Model, Fixtures
- **API & Backend:** REST APIs, Postman, Network Response Validation, Client-Server Testing
- **Performance:** k6, JMeter
- **CI/CD & Infrastructure:** GitHub Actions, GitLab CI, Jenkins, Docker, Allure
- **AI in Testing:** GitHub Copilot, Cursor, MCP, LLM-based Playwright code generation
- **Debugging & Tools:** Chrome DevTools, Wireshark, DBeaver, Jira, Linux, Windows
- **Networking:** 802.11 / Wi-Fi, Access Points, Switches

EXPERIENCE

2020 – Present: Commit — Petah Tikva

Software Automation Engineer

- Designed and built E2E automation frameworks from scratch using Playwright/TypeScript and Pytest, with Page Object Model and custom fixtures. Delivered for 5 client products in defense, healthcare, and e-commerce.
- Cut regression time from 3 days of manual testing to a 60-minute automated run by replacing manual regression with automated E2E suites.
- Built E2E suites of 30–100 tests per project. Each test combines UI flows, API calls, and network-response validation in one scenario, catching backend defects that UI-only tests miss.
- Integrated test suites into GitHub Actions, GitLab CI, and Jenkins pipelines with Allure reporting.
- Owned a framework used by 4 engineers. Onboarded new team members, reviewed automation pull requests, and am currently helping a colleague set up automation for another client project.
- Introduced AI-assisted test development (Copilot, Cursor, MCP, and LLM-based Playwright code generation), raising team test-creation efficiency by 25%.
- Wrote SQL queries to set up test data and verify backend state. Diagnosed client-server defects across Windows and Linux using DevTools, Wireshark, Postman, and DBeaver.
- Ran load and performance testing with k6 and JMeter.
- Defined test strategy and documentation (STP, STD, STR) as part of a QA process that cut defect leakage by 30%.

2015 – 2020: Intel Corporation — Petah Tikva

Wi-Fi Test Engineer

- Validated Wi-Fi driver and firmware features against 802.11 protocol standards to improve wireless reliability on Intel platforms.
- Set up and operated network test environments (Access Points, Switches) to reproduce complex wireless scenarios.
- Isolated driver and firmware defects and delivered detailed reproduction data to development teams.

2013 – 2015: Freelance QA Tester — uTest, BugFinders

- Tested web and mobile applications across multiple browsers and platforms (functional and black-box testing).

EDUCATION

B.Sc. Computer Science — National Polytechnic University, Ukraine

MILITARY SERVICE

2008 – 2010: Israeli Air Force

Full military service. Discharged with the rank of Sergeant.
